

# 2-3 tree

# 2-3 tree

(Not for the exam)

The tree is empty

or the root is

- 2-node  $r$  with data element  $a$ . If  $r$  has left child  $L$  and right child  $R$ , then  $L$  and  $R$  are non-empty 2-3 trees of the same height,  $a$  is greater than each element in  $L$ , and  $a$  is less than each data element in  $R$ .

or

- 3-node  $r$  with data elements  $a$  and  $b$ , where  $a < b$ . If  $r$  has left child  $L$ , middle child  $M$ , and right child  $R$ , then  $L$ ,  $M$ , and  $R$  are non-empty 2-3 trees of equal height,  $a$  is greater than each data element in  $L$  and less than each data element in  $M$ , and  $b$  is greater than each data element in  $M$  and less than each data element in  $R$ .

# B-tree

B-tree of order **m**

is a tree which satisfies the following properties:

1. Every node has at most **m** children.
2. Every non-leaf node (except root) has at least  **$\lceil m/2 \rceil$**  children.
3. All leaves appear on the same level
4. The root has at least two children if it is not a leaf node.
5. A non-leaf node with **k** children contains **k-1** keys
  - keys:  $key_1, \dots, key_{k-1}$  are sorted
  - keys in subtree  $i$       $SubTree_i \geq key_{i-1}$      if  $i > 1$   
                                  $SubTree_i \leq key_i$      if  $i < k$
